

## **Daniel Price**

Daniel's roots into the insurance industry go back over 2 decades when his father began a career as a catastrophic insurance adjuster. As a teenager, Daniel traveled with his father adjusting property claims throughout the U.S.A. When Hurricane Katrina hit in 2005, He became an independent adjuster and over the next decade, Daniel became a top producing wind and flood claims specialist with an average closing ratio of 3/1 claims to his next closest peers.

In 2015, Daniel formed Keystone Experts and Engineers, the first forensic engineering firm created by an insurance adjuster. Because of Daniel's knowledge of the claims process, he was able to create a unique business model that enables Keystone's experts to investigate claims throughout the country and produce a solid, accurate report, much faster than industry standards. Within 30 days of inception, Keystone was taking on more volume and completing reports more timely than the industry leaders that had been around for decades. Since then, Daniel has led the exponential growth of Keystone providing engineering services in every state, even Puerto Rico and the U.S. Virgin Islands, to hundreds of national and regional clients.
